Date of Discharge: July 26 1915 Clinical Clerk. G.C.A.

Treatment & Diary:

July 17/15 Killian Submucous resection of septum
by Dr. Rogers under local anaesthetic.

Cartilage presented a Rt & L deviation
in vestibule on Rt side making resection
fairly difficult. There was also a
spur on the left posteriorly which probably
caused most of the symptoms.
packed both nares & 2x4 of gauze
vaselined.

July 18/15 gauze removed from both
nostrils and irrigated w/ H₂O 2-
patient suffers & headache

July 22/15 Turbinotomy left by Dr. Rogers, local
anaesthetic.

The inferior turbinate was greatly
hypertrophied - Removal relieved nasal
obstruction markedly.

Date of Admission,

July 22 1915Name (in full) Wilson Miss Lena

Address

92 Prince Arthur EastOccupation operatorAge 27Single, ~~Married~~, ~~Widowed~~Birthplace RussiaReligion Heb.In service Dr. JamiesonRecommended by O.D.Complains of the following: Headache - Earache (left), vertigo,
TinnitusHistory of Development of Present Condition: Two years ago patient suffered
a discharge from left ear accompanied by
headache, ringing in ears and vertigo.
She attended Dispensary where she was treated
for one year by Dr Mathewson. Two weeks ago above
symptoms reappeared except there has been no
discharge. Plugs of cotton however have a foul odor.
patient walked to hospital T99'-P80-R20Family History: M A WJ D - meningitis (?)

Previous Health:

TyphoidScarletDiphtheria(?) ChildhoodPrevious Admissions: noneDiagnosis for Indexing: Chn. Otiter. media Operation or Treatment: Palliative -
Chn. mastoiditisDetailed Diagnosis: perforation of left tympanum

Result

~~Cured~~Improved ☒~~Not Improved~~~~Not Treated~~~~Died~~Date of Discharge: July 29 1915 Clinical Clerk. G.C.A.

Treatment & Diary:

- July 22 1915. Ice to head and ear
cal + Sod and Seidlitz
- " 23 patient much relieved complaining
of Vertigo
Ear syringed t.i.d. w/ warm boracic
Hot fomentations.
- " 24 Ear drum looks much less inflamed
X ray -
- " 26 X ray shows a ~~the~~ mastoiditis but
condition scarcely warrants operation
since there is no discharge.
advised to remain in for observation
- " 29 Discharged - against advice & assumes
own responsibility.

Patient under treatment

ROYAL VICTORIA HOSPITAL

Name: *James Joseph* Date: *July 22 1915*

Physical Examination :

Patient of apparent age stated
fairly well nourished
Eyes - pupils equal & React to L & R
Teeth O.K. - Tongue furred slightly - Breath fetid
mentality and cerebration fair.
ec. B. 20 J

T. 99¹ - P 88 - R. 20 J

Cardio Vascular System

pulse normal

precord "

W.B.C. 9200

Lungs - normal

abd- normal - patient inclined to constipation

nervous syst -

no optic neuritis - slight photophobia
no nystagmus

no dystigmus

Auditory nerve Rt hears watch 38 c.m.
Lft Cannot hear watch

Tuning fork Rt hears O.K. both high & low notes
Lft does not hear at all

DO - Bone conduction heard in Rt. ear
when tuning held over forehead - NOT in left
Held over mastoid (left) is heard
slightly - Tests unsatisfactory
Ear Syringed & Cold water nystagmus to left
" " Hot " " " Rt

Local Condition - Rt. Ear - Drum opaque and drawn in - no present inflammatory signs

Lft Ear - Handle of malleus injected
as is periphery - no discharge - a large pyofoliation
superiorly - inferiorly granulations over tympanic
probably an acute exacerbation of a chronic
condition.

Treatment & Diary:

July 27 1915 The tonsils were injected with
adrenaline novacaine patient having previous
a Hypo of Morph $\frac{1}{4}$ atrop $\frac{1}{100}$.

The tonsils were freed by dissection
and subsequently shaved.
The Rt tonsil contained actual pus while
the left was full of cheesy matter in
crypts.

Patient had no haemorrhage what
was - Tonsil beds swabbed w/ H_2O_2 + patient
returned to ward.

In about two hours patient complained
of much pain, a severe neuralgia affecting
all the teeth and part generally depressed.
Hypo morphine gr $\frac{1}{2}$ ordered.

at night - He feels somewhat better.

July 28 - patient sitting up in bed feels very
well but throat rather sore. Local condition
excellent. Throat clean and very little
inflammatory reaction.

" 29 Suffering slight Diarrhoea.
Throat rather painful. Painted internally
with I. Iodine.

History of Development of Present Condition:

nose started to bleed about 3 a.m., Sunday morning Aug 1 - Patient propped herself up in bed and remained quiet, and it ceased. She dressed and went to breakfast and hemorrhage started again. Dr. Rosenbaum was called and packed the right nostril & iodoform gauze. The hemorrhage continued and she is sent to ward with a second packing nose.

Treatment & Diary:

Aug 6/15 Ether given by Dr Morris

Rad Antrum operation (Caldwell-Luc) by
Dr Jamieson.

A pack of ribbon gauze placed in post nares
and gauze back of molars to absorb blood -
an incision 4 c.m. in the usual gingivo labial margin
left side was made - peristomium reflected and
antrum opened. Bleeding checked & peroxide
sponges. The cavity curetted and much old granular
tissue removed. The anterior angle well removed
and opening made into left nostril - The ant
end of inferior turbinate removed. Wound packed
lightly with strip of Iodoform. Three silk sutures
closed the gingivo labial margin of peristomium &
mucous membrane.

There was some discoloration and swelling of
left cheek and eye. Cold compresses applied.

Aug 7 Some swelling and discoloration under eye. No
hemorrhage - Very little pain.

Aug 10/15 Discoloration gone - Swelling subsiding.

Aug 12/15 Sutures removed - wound irrigated thru nose
Very little mucoid pus obtained

Aug 15/15 Irrigated - no discharge

Aug 18/15 Irrigated -
pat Discharged

Treatment & Diary:

Aug. 9/15 Tonsillectomy, Sluder } Dr Jamieson
Adenoidectomy
ETC - anaesthesia

There was bleeding at time of operation - checked by digital compression. Tonsils very large and diseased.

8:15 Patient vomits large amount (103) of blood. ^{Hypo morphine given} Hemorrhage found from both tonsil beds - Digital comp failed to check bleeding - Patient very weak. Dr Fraser & Dr Brown called - Putraetinum ordered - Dr Jamieson called.

Hemorrhage controlled w/ tonsil clamps
3 XXT intravenous given.
RT tonsil bed touched with AgNO₃ - Clamp left on left side. Hot water bottles in bed - pulse much better -

11 P.M. Patient again vomiting blood - bleeding from right tonsil bed. 3 clamps applied to both sides -

Aug 10/15 2 A.M. Patient vomits more blood - Clamps reapplied - condition fair

7:30 Clamps removed all bleeding stopped pulse rather fast and easily compressed.

Aug 11 - patient very comfortable - pulse good

Aug 13/15 Patient in excellent condition - allowed up

Dr. Anderson

Aug 18/15 Simple mastoid operation Rt.
Dr. Jamieson -
Ethel Dr. Morris

An operation in all respects similar to the one performed on the left was carried out, excepting lateral sinus was not exposed.

Aug 20/15 Leg (left) put up in plaster Dr. Jamieson
chloroform Dr. Morris
~~Aug 23/15~~ Dressing changed on both mastoids
rather profuse discharge

Aug 23 Dressing changed - wounds lightly
packed & iodoform.

Aug 25 Dressing changed - no packing - wounds
granulating from below upward -

Sept 2 - Wound dressed on alternate days
Condition very good - Slight discharge
from Rt ear

Sept 4/15 - Lower Rt molar extracted under gas

Sept 9/15 wound dressed on alternate days. Patient
complains of much pain on Rt side of head
& face. nothing abnormal on physical exam.
Wound clean - excessive granulations cauterized
w/ CuSO₄.

Sept 11/15 Temperature 100.2 patient feels generally
miserable - much discharge from Rt ear
Syringed daily -

Sept 12/15 - Patient much better - allowed up in
wheel chair

Sept 14 - Both ears dressed and condition
excellent. Lft ear practically no discharge

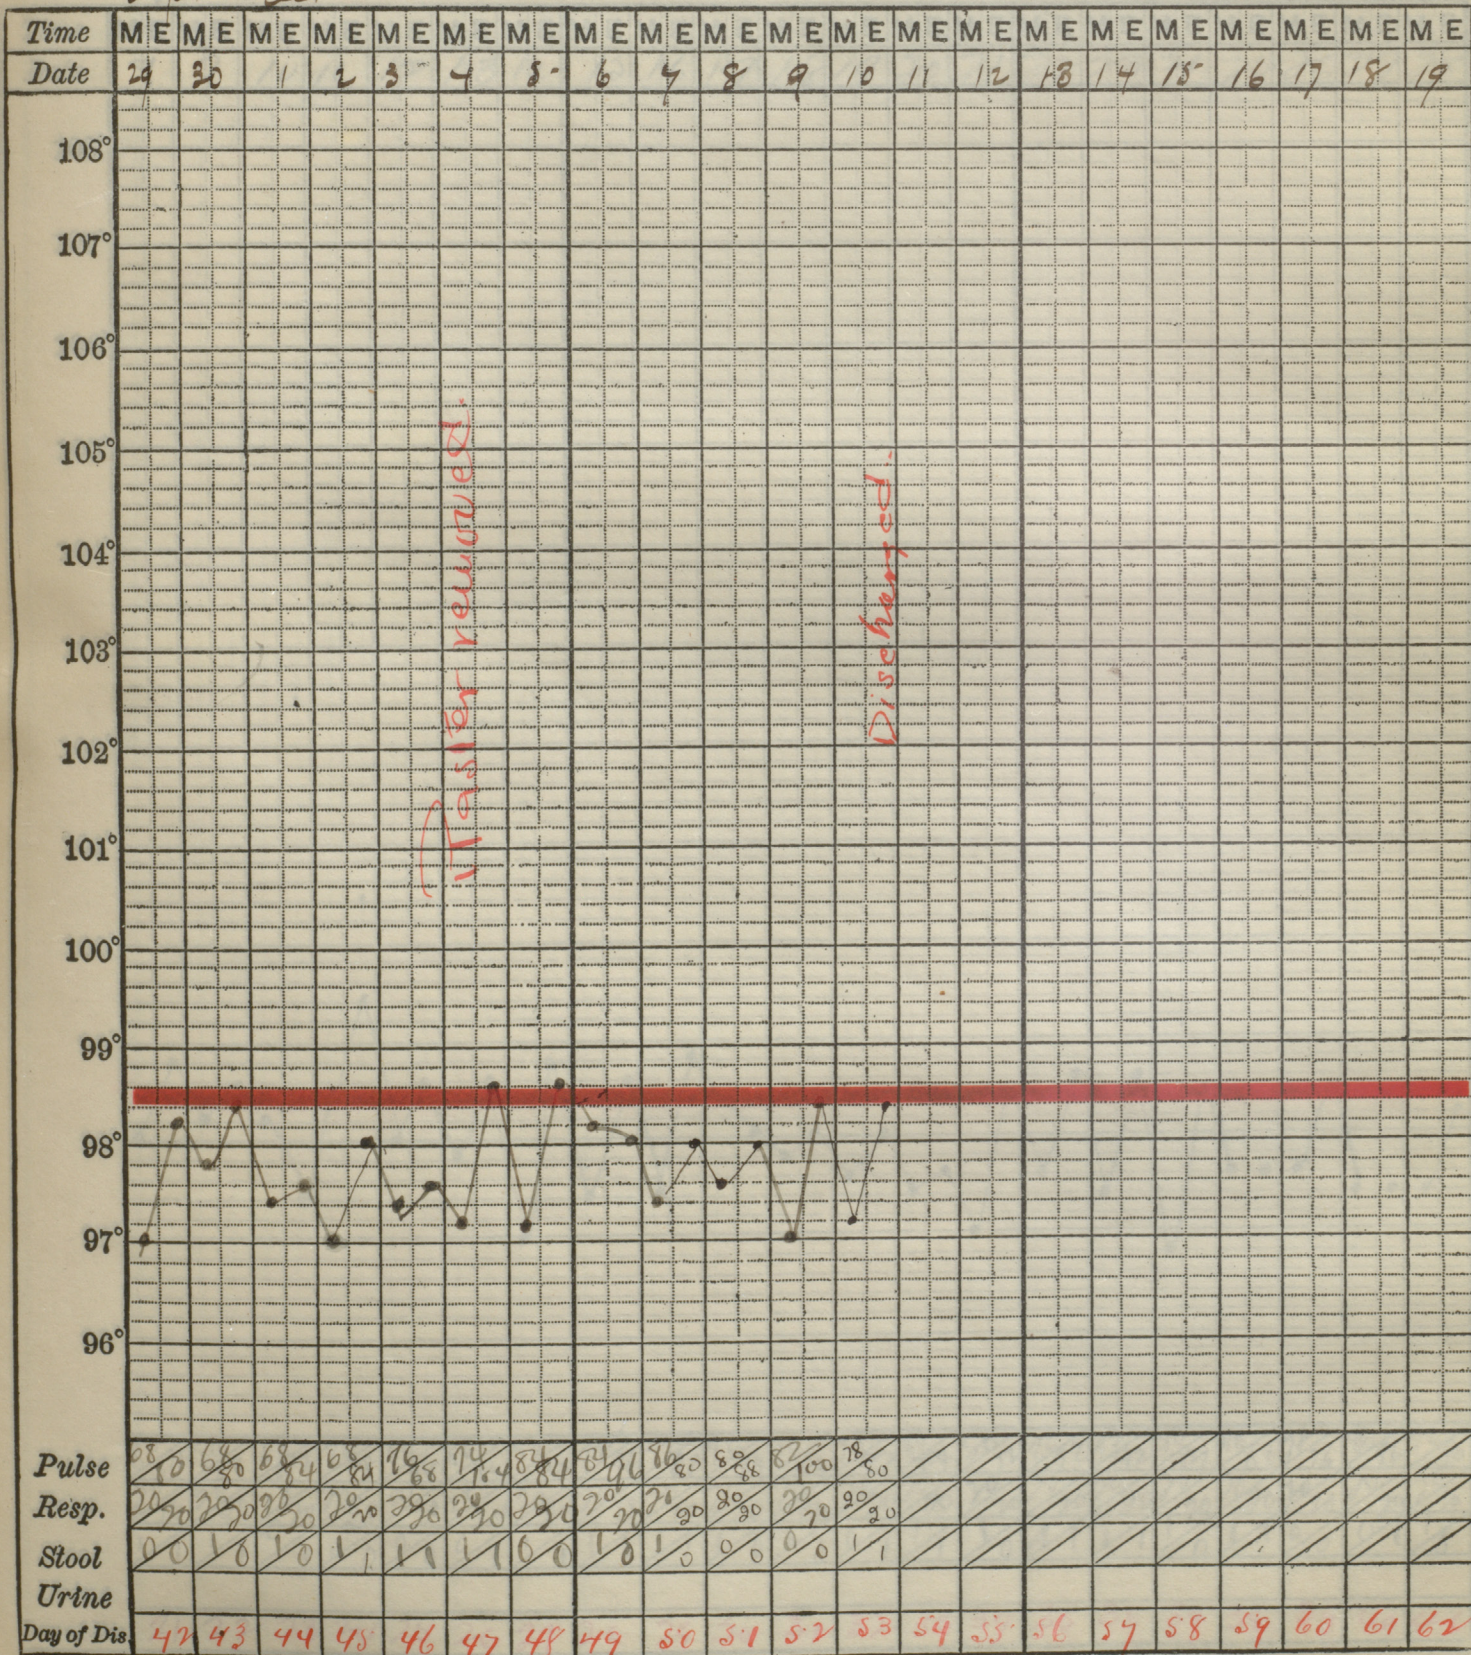

Sept 27 Ears & mastoids healed & clean
slight deafness in left ear
Arm dressed - nearly healed

ac. mastoiditis rt & left

DATE

Aug. 16, 1915

Operation Simple Mastoid Left

Dr. Jamison

Ether (Jannway apparatus), Dr. Morris

Head prepared in usual manner, shaved 2 in around ears - Iodine wash up.

Both subjective + objective symptoms being more severe on left, that side was opened by a curved incision $\frac{1}{4}$ in posterior to ear and extending from just below the tip of the mastoid to the level of the top of the auricle. Bleeding points secured and mastoid retractor inserted.

The periosteum was elevated exposing the spine of Henle, supraaural ridge and the tip of the mastoid. The outer table chisled away and antrum opened. Very little pus in antrum although various cells contain much pus and showed signs of active disease. Culture taken.

The mastoid cells were carefully removed & chisel + gouge - lateral sinus exposed & found healthy - A larger amount of bone required removal to get beyond the disease than was anticipated. Wound packed & iodoform gauze and bandaged.

Condition of patient not to warrant delay and right mastoid not touched.

as supp. abs. wall 12 1/2

Name: Phillips

Diagnosis: as. metastatic 12 1/2

Clinical Clerk

DATE

Aug. 16, 1915

Operation: Removal of
tumour
Ethel (young) 12 1/2

Heart prepared in usual manner, placed
in alcohol jar - to follow work up.
Both subjective + objective symptoms being
now absent on left, that side was opened
by a curved incision 1 1/2" posterior to ear
and extending from just below the
tip of the mastoid to the level of the
top of the auricle. Bleeding point secured
and mastoid retractor inserted.
The periauricular area elevated exposing
the spin of Nerve, supraauricular ridge
and the tip of the mastoid. The outer
table drilled away and entire opened
very little gas in anterior table visible. All
contents much gas and removed with
of certain disease. Culture taken.
The mastoid cells were carefully removed
of chord + group - lateral sinus exposed +
found healthy - a large amount of bone
required removal to get beyond the disease
then was anticipated. wound packed
2 Jodiform gauze and bandaged.
Conversation of patient that the morning
delay and right mastoid not touched

DEPARTMENT *Oto Larynx* Royal Victoria HospitalCase No. *6084* Hospital No.Date of Admission, *Aug 24 1915*Name (in full) *Archer Alice*Address *56 Bellevue Ave*Occupation *Domestic*Age *21*Single, ~~Married~~, ~~Widowed~~Birthplace *Eng*Religion *Prot*In service Dr. *Jamieson*Recommended by *Dr White*Complains of the following: *Discharge from left ear - Deafness -*

History of Development of Present Condition: *from about age of 6, patient thinks following her attack of measles, there has been a discharge from the left ear. At this time there was an operation performed on the ear probably a paracentesis. The discharge is of a yellow green color and foul odor. One year ago there was some hemorrhage from the ear & she sought treatment. Deafness has persisted more or less since childhood - grown worse lately no tinnitus, no vertigo - no otalgia.*

Family History: *F - D - Cardiac Dis 42
M - D - pneumonia 29
No cancer - tbc - no deafness*

Previous Health: *measles childhood
Pertussis*

Previous Admissions: *none*

Date of Discharge: *Sept 18/15* Clinical Clerk. *G.C.A.*

Treatment & Diary:

Aug 26/15 Radical mastoid operation - Dr White
Ether - Dr Morris

The drum membrane was freed from the malleus in order that it might fall over opening of eustachian tube.

The usual skin incision was made, periosteum elevated and the spine (supra meatal) and canal discerned. The bone was carefully chiseled away exposing the antrum, the aditus and middle ear. The parts were carefully curetted leaving no overhanging ledges of bone - Special care being taken to avoid the facial (VII) nerve.

A plastic operation done on ext. aud. Canal. Iodoform gauze packed thru the plastic - Ext. wound closed with 3 silk worm gut sutures. Small piece of gauze inserted to allow drain.

Aug 28 - Wound dressed - drop of pus at lower end of wound - Suture & gauze removed - small strip of gauze inserted. Patient feeling very well. No temperature no pain.

Aug 31/15 Remaining sutures removed - Patient complains of darting pain at times.

Sept 2/15 Gauze plug removed from plastic wound flaps in good position and healing well. Bone plug inflated and dry dressing applied.

Sept. 7/15 Syringed w/ H_2O_2 considerable discharge.

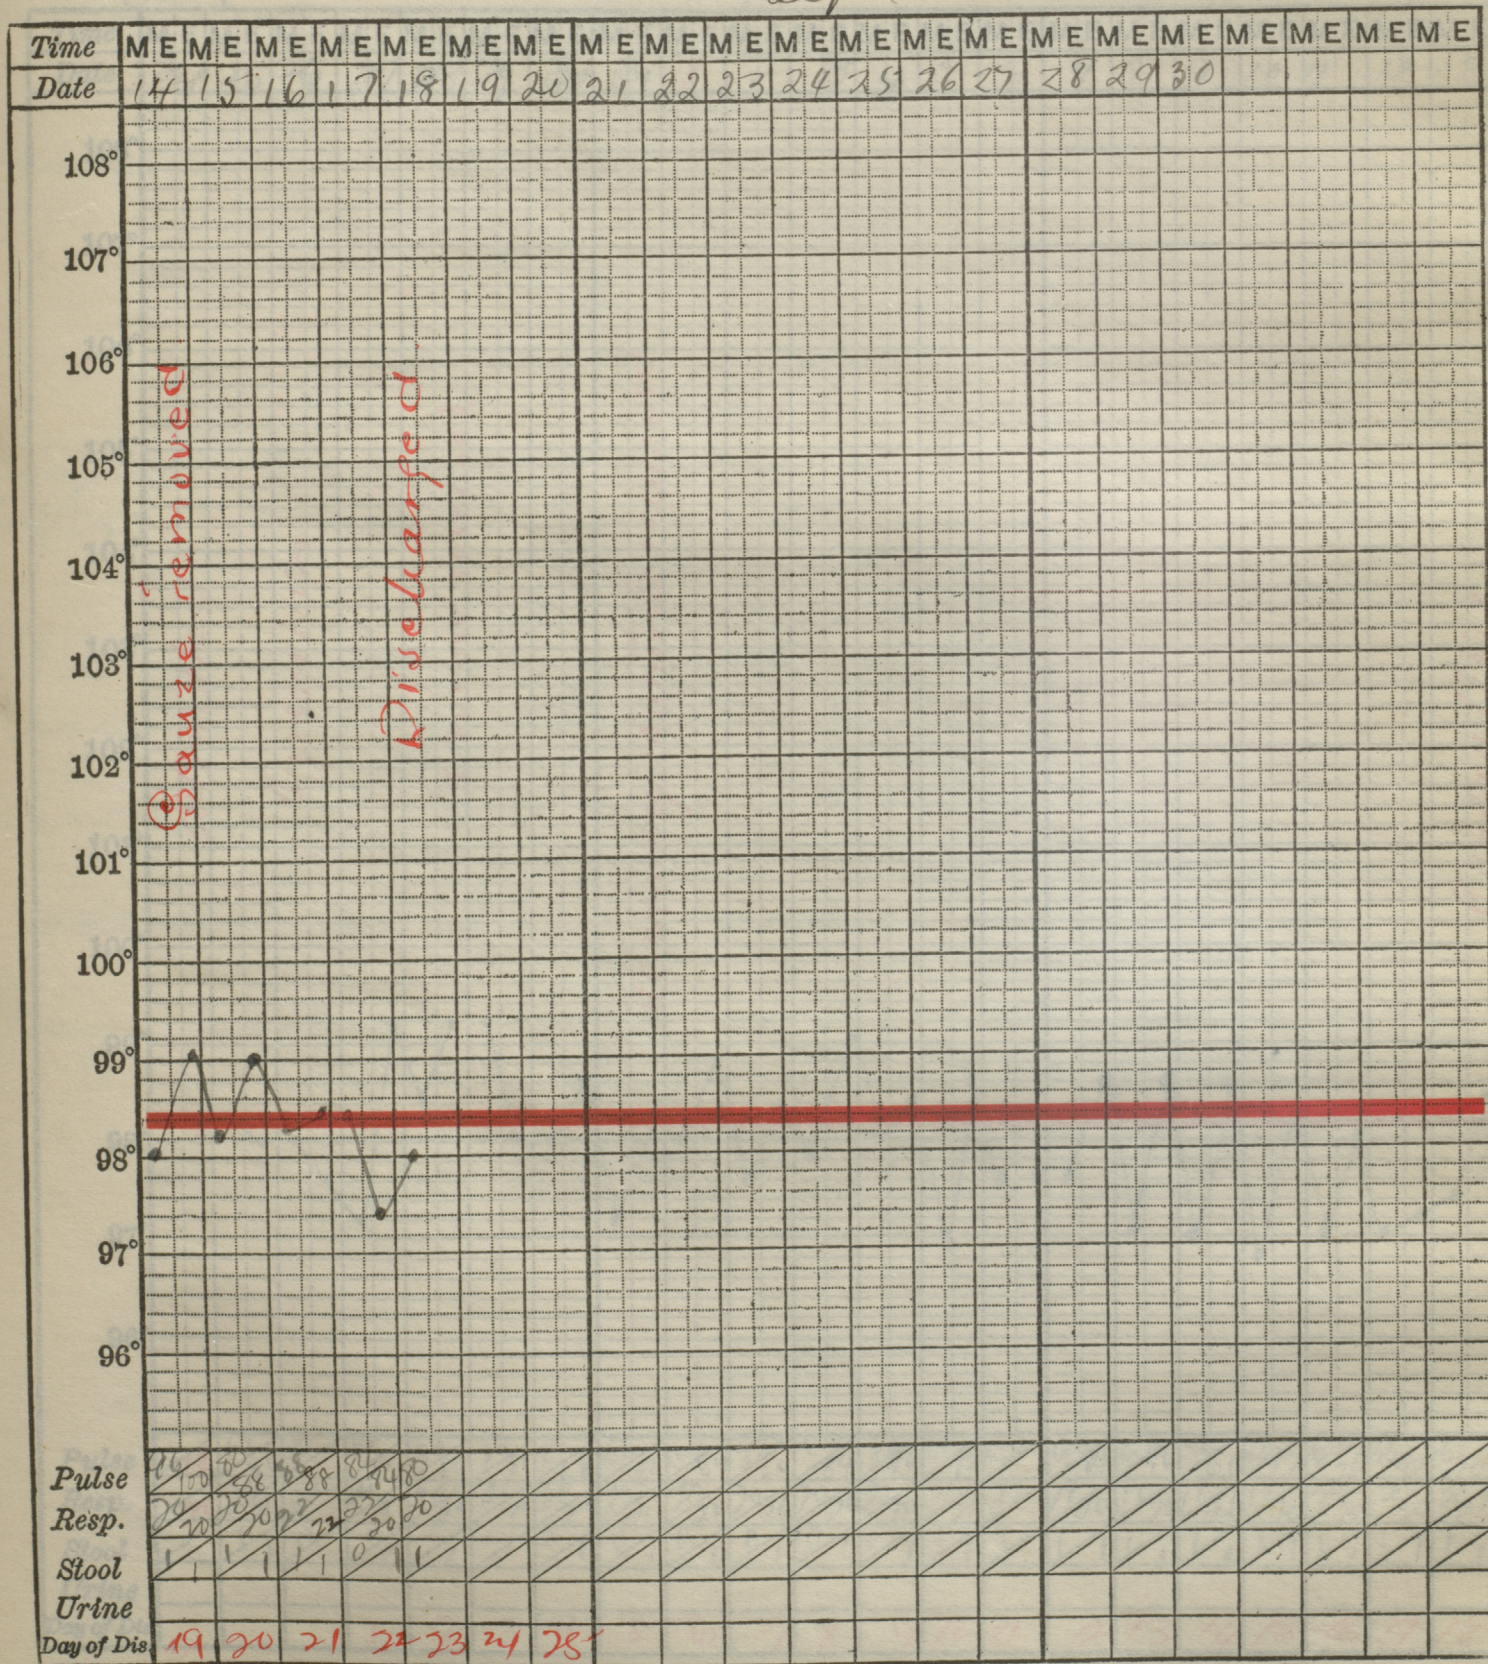

Sept 12 - Ear looking very well - very little discharge which is serous. As there is a deviation & septal spur on left it is thought advisable to remove it.

Dr. Anderson

G.C.A.

Treatment & Diary:

Aug 25/15 Double Radical Antrum operation
Dr Garrison
Ether Dr Morris

The usual Caldwell Luc operation was done on both sides - viz: an opening established thru the nasal wall of the antri thru which much diseased tissue was removed. The left contained thick inspissated pus. An permanent opening was made into the nose a light gauze pack introduced from left nostril to left antrum - Both wounds closed & silk work put.

Aug 26/15 Throat very sore - very restless at night
Gauze removed from left nostril

Aug 30/15 Sutures removed from Rt side

Aug 31/15 Sutures removed from Lft side - Antri irrigated - Fluid returned very clear.

Sept 7/15 Discharged
